

AGARICON

Ross Lovegrove 2001

TABLE

A curved extruded aluminum ring, perimetral to the lid, is the user's interface. By gently touching or pressing it quickly with the fingers or suddenly losing the hold, you can progressively modulate the light. The electronic sensor dimmer both allows the on/off function and the intensity regulation. The lamp body and its "lid" are made with high pressure injection-moulded polycarbonate. Integrated sensor dimmer.
